Installation Instructions
Push Button Latch

Step 1: Assemble spring, spindle and thumb button or lock button into outside handle as shown.

Step 2: Insert above assembly through drilled holes in door from outside of door. Position inside latch mechanism over holes and guide spindle in rectangular slot in latch. Note: depressing button on outside handle makes this easier. Fasten with the two machine screws. CAUTION: DO NOT OVER TIGHTEN AS THIS MAY CAUSE LATCH TO BIND.

Step 3: Optional strike installation. If latch bolt on inside latch does not engage with Z bar, mount strike plate on jamb to firmly engage latch bolt.
