

Important supplement for Plantation MW.

The Plantation MW arbor is a multiple width arbor. It can be made with an inside width up to 81 1/2". If the 81 1/2" width is desired no cutting is required, just follow the standard Plantation instructions. The only difference is there are more purlins. If a different width is desired you will have to cut the beams.

Tools Required:

- *Tape measure
- *Pencil
- *Square
- *Saw

Determine the desired inside width and add 14" to your measurement to account for the arbor posts and necessary overhang. Measure and mark the beams using a square to ensure a straight line.

Cut off extra beam with saw. Follow standard instructions to finish arbor assembly.
